

**NAME**

scor2prt – source-parts separation program for pmx, a MusiXTeX preprocessor

**SYNOPSIS**

**scor2prt** basename[.pmx]

**DESCRIPTION**

scor2prt is part of pmx(1), a preprocessor for MusiXTeX. It can automatically create parts from a score by generating a set of .pmx files, one for each part, from a single .pmx file for the score. The appearance of the parts can be controlled by special commands in the main file. Read the PMX Manual for more information about that.
